The “Molnija” (Lightning) watchmaking company was founded in 1947 and to this day continues to bring together the best watchmakers throughout Russia. The company is centered upon a commitment to producing watches and calibers of the highest precision. Our watches are the symbol of reliability, accuracy, and an unshakeable reputation. Our chronographs are designed for aeronautical application, stand up to extreme temperatures and pressure, and for decades have served as a crucial link in Russian aviation.

The historical roots of the company reach back into the 19th century and trace back to the legendary American watchmaking firm Dueber-Hampden. Dueber-Hampden was founded in 1877 through a merger with the Wright Brothers’ factory, the very brothers heralded as the inventors of modern aviation. Dueber-Hampden existed for more than 40 years and to this day continues to be recognized as a symbol of American precision engineering and watchmaking. The company was a major player in the growing American economy and has made its mark in history as the largest American watchmaker.

Although the great depression led to the end of production in the USA, due to an agreement between the USSR and the United States this one of a kind technology was purchased, shipped, and put back into production on the First and Second Watchmaking Factories in Moscow.

During the Second World War the First Watchmaking Factory was evacuated from Moscow to the Urals, and in 1947 resumed production as the firm "Molnija". By the end of the 1940s the firm was producing aeronautical timepieces and chronographs for the defense industry. The production of these timepieces has become the main task of the factory ever since. The history of the firm is deeply intertwined with the history of Russian aviation. First appearing in the cockpit of the legendary MIG-15 jet fighter, our timepieces quickly confirmed their reputation for quality, and by the 10th year of production the factory was producing over 30 thousand specialized watches, and our first aviator's watch became widely known.

In addition to specialized production, the factory also perfected timepieces for the civilian sector, such as pocket watches and interior clocks. It was these models that allowed our company to become one of the most famous in Russia, as well as in the USA, Germany, Turkey, Austria, and even Switzerland.

We continue to carry out this legacy even today. Our cases and mechanical components (including balance wheels and springs) are produced in-house. We also do finishing, painting, case plating, dial printing, assembling, and carry out quality assurance. We continue to develop, test and launch production of new calibers, a major move for the company was the relaunch of the 3603 in-house caliber.

## MECHANICAL WATCH FOR DIVERS

---

This watch was designed in partnership with a leading Swiss design studio especially for researchers and people who delight in the wonders of the deep blue sea. The soft silicone watch strap has a comfortable fit. The durable case is protected by sapphire crystal, the entire structure is resistant to damage and scratches, large luminous hands are visible underwater and in the dark, and the unidirectional bezel is designed so that you can easily time the dive, even with gloves on. The watch case comes in steel or black with an ion coating, which offers resistance to damage and scratches. The dial is available in blue, gray or deep blue — this design is inspired by the play of iridescent colours in the depths of Lake Baikal.

## Technical characteristics:

- JAPANESE MIYOTA 8215 AUTOMATIC MOVEMENT
- FUNCTIONS: HOURS, MINUTES, SECONDS, AND DATE 46 MM
-  SS STEEL CASE
-  SAPHIRE CRYSTAL
- SILICONE STRAP
- HANDS AND MARKERS WITH LUMINESCENT COATING
- WATER RESISTANT TO 20 ATM OR 200 METERS
- LIMITED EDITION 500 PCS
